

Ankit Tiwari

REACT.JS & NODE.JS FULL STACK DEVELOPER

Mumbai, India · +91 8082285547 · ankitrtiwari2@gmail.com · linkedin.com/in/contactankitrtiwari2 · github.com/AnkitRTiwari

SUMMARY

Full Stack Developer with 4+ years of experience designing, developing, and deploying end-to-end, scalable, production-grade web applications across the MERN stack, with strong command of application architecture spanning frontend, backend, and database layers. Specializes in RESTful API design and integration, MongoDB schema design and optimization, JWT-based authentication and role-based authorization, secure coding principles, and high-performance React interfaces, with backend services deployed on AWS (EC2). Experienced in owning the full development lifecycle – from requirements gathering through deployment – while partnering with engineering leadership and cross-functional teams to deliver scalable technical solutions.

SKILLS

LANGUAGES	JavaScript (ES6+), TypeScript, HTML5, CSS3, jQuery
FRONTEND	React.js, Redux, Redux Toolkit, Material UI, Bootstrap, Tailwind CSS, Responsive Design
BACKEND	Node.js, Express.js, MongoDB, Mongoose, RESTful API Design, MVC Architecture, JWT, bcrypt, Middleware Design
CLOUD	AWS (EC2)
TOOLS	Git, GitHub, Webpack, NPM, VS Code, Figma, Agile/Scrum, Postman
AI TOOLS	Claude AI, ChatGPT, GitHub Copilot
PRACTICES	OOPS Concepts, Application Architecture, Secure Coding Principles, Performance Optimization, Code Reviews, Debugging, Requirements Gathering, End-to-End Development

EXPERIENCE

Senior Developer · Quality Kiosk Technologies

Mumbai, India

Oct 2025 – Present

- Architected and deployed a full-stack online examination platform to production on AWS EC2, independently owning backend and frontend development end-to-end.
- Engineered JWT-based authentication with role-based access control (RBAC), enabling secure, isolated login flows for student and admin user roles.
- Designed and built RESTful APIs following MVC architecture, incorporating request validation, centralized error handling, and reusable middleware for long-term maintainability.
- Built a reusable React.js component library and shared utility modules, increasing development velocity and consistency across the frontend codebase.
- Improved backend performance through asynchronous programming patterns, MongoDB query optimization, and caching strategies to reduce API response latency.
- Improved frontend performance using lazy loading, code splitting, memoization, and efficient state management, reducing initial load time.
- Partnered cross-functionally with product managers, UI/UX designers, and QA engineers in an Agile/Scrum environment to ship production-ready releases.
- Applied object-oriented design principles and secure coding practices, including input validation, encrypted credential storage, and role-based access control, across the API layer to align with application security and architecture standards.
- Partnered with engineering leadership during requirements gathering to translate business needs into scalable technical solutions, owning execution end-to-end through production deployment.

Node.js Express.js MongoDB Mongoose React.js JWT AWS EC2

Junior Developer · Zeal Interactive Services

Mumbai, India

May 2022 – Sep 2025

- Built the product listing module for a B2B e-commerce platform connecting manufacturers to wholesalers, delivering full-stack features across React.js and Node.js/Express.js REST APIs.
- Developed reusable React.js UI components and implemented Redux for centralized state management, reducing development time by 25% and ensuring design consistency across the platform.

- Integrated internal and third-party REST APIs and implemented secure JWT-based authentication flows for user login and session handling.
- Applied frontend performance optimization techniques, including lazy loading and caching, to improve Lighthouse performance scores.
- Migrated the platform's legacy styling system to Tailwind CSS, standardizing the design language across projects.
- Collaborated with senior engineers through structured code reviews and debugging sessions, adopting production-grade engineering practices, resolving defects prior to release, and progressively taking ownership of end-to-end features.

PROJECTS

Country Explorer

listofcountriesapi.netlify.app

React.js · REST API · SCSS

- Architected and deployed a responsive country-information web application using React.js, public REST APIs, and SCSS, hosted on Netlify.
- Implemented dynamic client-side routing, reusable custom components, and asynchronous Promise-based data fetching for country details and border navigation.
- Added a search and pagination system for browsing the full country list, alongside a Google Maps integration for viewing each country's location.
- Enhanced UX with shimmer loading states, try-catch based error handling, and a dark/light theme toggle persisted via Local Storage.

EDUCATION

Articleship (CA)

2018 – 2022

RMJ & Associates, Mumbai

B.Com

2018

Sydenham College of Commerce and Economics, Mumbai

Web Development

Self-taught – W3Schools, MDN Web Docs

CERTIFICATIONS

Responsive Web Design

freeCodeCamp

JavaScript Algorithms and Data Structures (Beta)

freeCodeCamp

Claude Code in Action

Anthropic
